

EduConsultant Platform — Project Overview & MVP Plan

Generated on May 25, 2026

EduConsultant is an educational guidance and scholarship platform designed primarily for students after FSC/Intermediate. The platform helps students discover scholarships, prepare for admissions, explore local and foreign universities, and connect with educational agencies and consultants.

Problem Statement

Many students after FSC/Intermediate are unaware of scholarships, study-abroad opportunities, admission pathways, and test preparation resources. This platform aims to centralize guidance, preparation, and consultancy support in one ecosystem.

Core Features

- Student profile and guidance system
- Scholarship listing and filtering
- AI-powered recommendations (future phase)
- Mock tests and interview preparation
- Agency lead management system
- Admin management panel

User Panels

Student Panel

- Registration/Login
- Profile management
- Scholarship exploration
- Mock tests and recommendations

Agency Panel

- Access student leads
- Filter/search students
- Track consultation status

Admin Panel

- Manage users and agencies
- Verify agencies
- Manage scholarships

Technology Stack

Backend: FastAPI, Python, SQLAlchemy, MySQL, JWT Authentication

Frontend: Angular or React (to be finalized)

Architecture Goal: Modular, scalable, API-first backend

MVP Scope

Version 1 will focus only on:

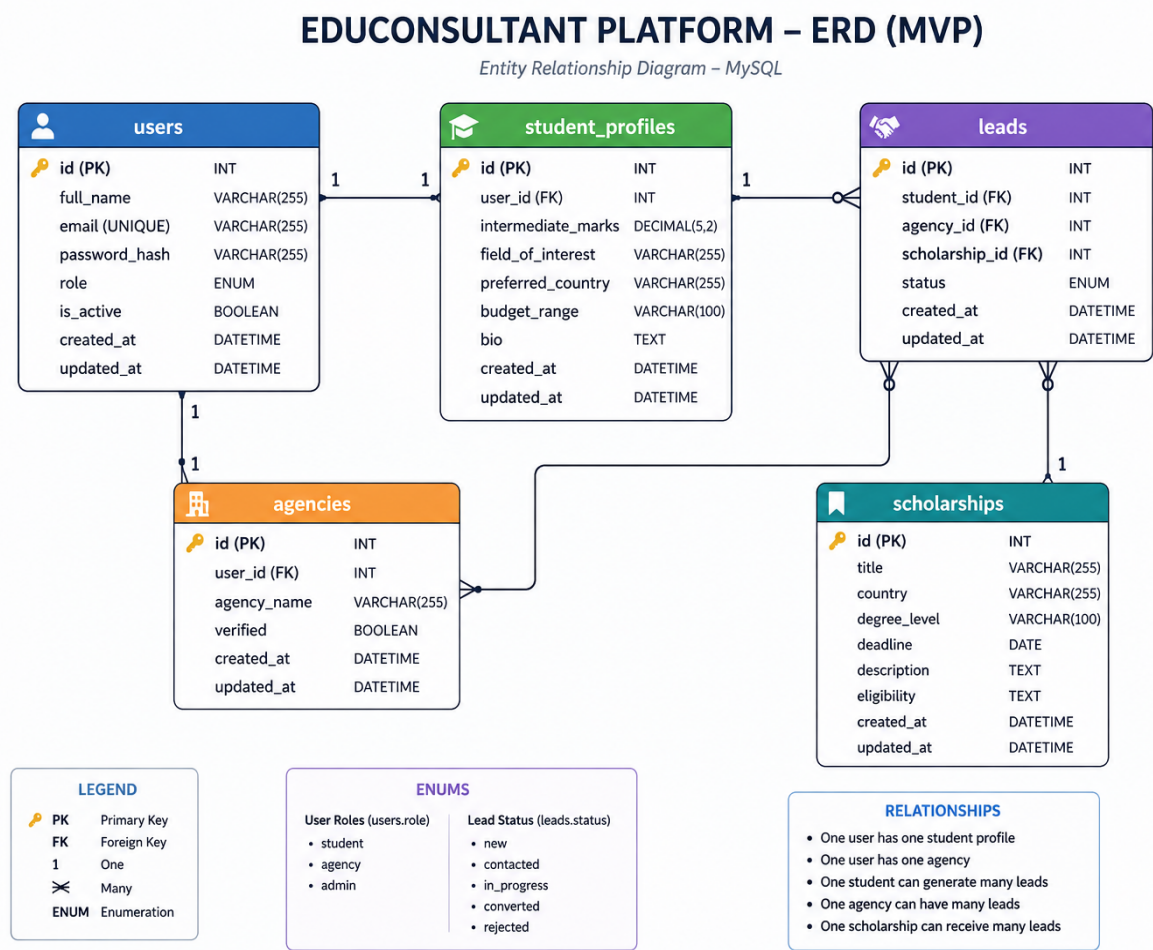

- Authentication system
- Student profiles
- Scholarship management
- Agency lead system
- Admin controls

Future Features

Planned future modules include:

- AI recommendation engine
- Interview simulation system
- Payment integration
- Real-time chat
- Video counseling
- Document verification

Initial ERD (Entity Relationship Diagram)

This document represents the initial MVP planning and system design for the EduConsultant platform. The focus is to build a scalable educational ecosystem starting with a strong backend foundation using FastAPI.
